

Authors

William H. E. Day

Systems Development Division, Poughkeepsie, New York.

Astronomy (A.B., Harvard College, 1958). After joining IBM in 1960, he worked on the design and implementation of the IBM 7040/7044 8K FORTRAN compiler and was involved with initial planning and implementation of OS/360. Since 1968, he has investigated register assignment and data optimization problems in the compilation process. Currently on leave of absence at Washington University.

Theodore D. Friedman

Research Division, San Jose, California.

Mathematics and philosophy (B.A., University of Michigan, 1958). After three years on the scientific staff of TRG, Inc., he joined IBM in 1963. Has been concerned with design automation, systems architecture, and security and privacy studies. Currently studying file organization and information retrieval.

Kenneth V. Hanford

IBM United Kingdom Laboratories Ltd., Hursley, England.

Algebra (Ph.D., Cambridge University, 1953). Joined IBM in 1956. Responsible for the programming development of the SCAMP Computer, for programming evaluation at the La Gaude product test laboratory, and presently for programming technology at the Hursley product test laboratory.
